

# 4 CRITICAL QUESTIONS

---

to ask when choosing  
a data warehouse

Not all data warehouses are created equal.

Some help you access, control, and manage data.  
Others will leave you stranded on key issues.

Use the following 4 questions to find the right  
data warehouse for you.

# 1. Can you solve the implementation nightmare?

## PROBLEM

### Implementations: the endless slog.

Every new implementation is a months-long ordeal. Why? Carriers are in the middle. Employers rely on them to provide data to new point solutions, and it takes forever. What are data warehouses doing about it? Nothing. "Sit and wait" is SOP.

## REMEDY

### 4-week launches.

They should help. Abett does. Together, we do a massive one-time roundup of plan data, from every carrier and vendor. We put it in secure storage and give you controls to share it directly with anyone. Hello ownership of your data and 4-week implementations. Goodbye asking permission for what's yours.

## 2. Can you solve oversharing?

### PROBLEM

### Oversharing all the time.

When one of your vendors gets hacked, and overshared employee data is leaked, you've got a problem. Can you control which specific members or fields are delivered to vendors? If not, why not? Why does oversharing even happen? 20<sup>th</sup> century technology can't solve 21<sup>st</sup> century problems.

### THE REMEDY

### Control.

21<sup>st</sup> century data warehouses like Abett give you granular control over data flows. Demand a modern solution that gives you appropriate control, so you can confidently manage your liabilities.

## 3: Can you get me all my data?

### THE PAIN

#### Some data.

Benefits teams do not have access to 100% of their plan data. Basic details like provider identity, procedure information, and cost of each claim. Allowable amounts. Disability and leave data. It's all closely guarded. How can you optimize without it?

### THE REMEDY

#### All of it.

Legacy warehouses can't or won't help. But modern partners will help you get the missing data you need. Abett works with carriers to get you total transparency – 100% of your claims-level plan data including entire columns of data you've never seen before.

## 4. Can I use Power BI?

### THE PAIN

#### Too many questions.

Did providing coverage through the EOM termination increase expenses too much? Simple questions should be easy to answer. Typical dashboards don't always cut it.

### THE REMEDY

#### BYO analytics.

You should be able to view and interact with all your data in whatever tools you like - Tableau®, Power BI®, etc. With these intuitive, user-friendly tools, asking and answering questions with data becomes second nature. Abett has universal integration with analytics tools. Does your data warehouse?

# Lockbox™ — a new data solution.

Use it as your data warehouse or add it to your existing one to do more with your data.

**+ It's your virtual safe.**

Benefits teams store their plan data in Lockbox and use it as the system of record or “single source of truth” for everything about eligibility and claims. **It's the Salesforce® of plan data.**

**+ It's an air traffic controller for your data.**

Lockbox is the only data solution with special controls you can use to manage the flow of data in and out. **Start sharing data directly with point solutions, carriers, and more.**

**+ It's your universal adapter.**

Plug Lockbox into any tool like Tableau® or Power BI® to analyze your data more quickly and easily. **Find answers and spot trends with the best analytics available.**
